MANIPURI PARALLEL TEXT CORPUS

Yumnam Premila Chanu

1.1 LDC-IL PARALLEL TEXT CORPUS

LDC-IL has developed parallel corpus in Indian mother tongues. India has 270 mother tongues as per 2011 census. Most of these mother tongues have no written text readily available and they are mostly oral languages. Most of them do not have any script of their own or use one or more than one dominant script used in that region. Following the requirements of the NEP-2020, LDC-IL initiated to collect sentences from different mother tongues that could give an idea about the basic structure of these 270 mother tongues.

A parallel corpus is a collection of texts in two or more languages that are carefully aligned sentence wise in pairs and placed either side by side or matched with a common sentence/phrase identification number. It is widely used in linguistics, translation studies, and Natural Language Processing. Researchers use it to compare vocabulary, grammar, and meaning across languages, while computational systems rely on it to train statistical and neural machine translation models. Parallel corpora also support language learning by providing real translation examples and enable cross-language information retrieval, allowing users to access information in multiple languages efficiently.

LDC-IL developed a framework to accommodate all the linguistic features of mother tongues. The sentences were collected from Indian scheduled languages especially from descriptive grammar books. The sentences cover the general grammatical and structural types like adjectival phrases, adverbial phrases, compounding, Interrogative sentences, Imperative sentences, different speech types, statements, structural question, coordination, subordination and so on. Moreover, it includes linguistic features such as use of adposition, anaphora, derivational morphology, inflectional morphology and language specific features like emphasis, equative, possession, reciprocation, reflexive expression and so on. For more details on the source collection for this parallel corpus, please refer to the [LDC-IL Corpus Insights \(2025\)](#).

This parallel corpus can be used in AI development by enabling the creation of Indic multilingual foundation models, develop cross-lingual knowledge graphs and create low-resource language adapters. By providing high-quality linguistic data, it strengthens natural language understanding and generation. As India rapidly advances in the digital age, it is essential to preserve and promote undocumented mother tongues by bringing them onto digital platforms, ensuring they are sustained and able to thrive for future generations.

Low-resource languages have a significant impact on both AI development and digital world. When AI systems are trained mostly on high-resource languages, they become biased toward those linguistic and cultural contexts. Including low-resource languages helps build stronger multilingual foundational models. Exposure to diverse grammar structures, vocabulary, and linguistic patterns improves cross-lingual learning and generalization. Language carries cultural knowledge. Incorporating low-resource languages enriches AI systems with diverse worldviews, idioms, and traditional knowledge systems. If a language is not supported digitally, its speakers

may be excluded from online education, e-governance, healthcare services, and digital commerce. When digital tools support local languages, more people can participate in the economy. Local languages often contain indigenous knowledge about agriculture, medicine, environment, and culture and therefore bringing them into digital ecosystem safeguards the linguistic treasures that language might contain.

Supporting low-resource languages makes AI more inclusive, intelligent, and representative of linguistic diversity. In India, where hundreds of mother tongues co-exist, investing in low-resource language technologies is essential for equitable digital growth.

1.2 CHALLENGES IN CREATING A PARALLEL CORPUS

Creating a Parallel Corpus for mother tongues in India involves several linguistic, technical, and socio-cultural challenges. The major difficulty is the lack of standardized orthography in many regional and tribal mother tongues. Most of the mother tongues use the prominent script used in their region. Some mother tongues may use multiple scripts or even newly created writing systems, which complicates the corpus development. Another challenge is the scarcity of written and digitized resources. Many mother tongues are used for daily communication only.

Dialectal variation is another serious issue, as a single mother tongue may have numerous regional varieties with differences in vocabulary, pronunciation, and grammar. This makes it difficult to ensure consistency and representativeness in the corpus. Accurate translation is a concerned matter. Proficient bilingual speakers may be limited for low-resource languages. Maintaining semantic equivalence across mother tongues with different cultural contexts can be challenging. Sometimes equivalent words are not available due to the socio-cultural differences. These factors affect large-scale parallel corpus development in Indian mother tongues. The creation of reliable and balanced parallel corpora for Indian mother tongues is a complex and resource-intensive task.

1.3 MANIPURI: A BRIEF INTRODUCTION

Manipuri, also known as Meiteilon, is a Tibeto-Burman language primarily spoken in the northeastern state of Manipur, India. It serves as the official language of the state and is a vital lingua franca for the diverse ethnic groups inhabiting the region. Recognized as one of the Scheduled Languages under the Eighth Schedule of the Indian Constitution, it holds a prestigious position in the linguistic landscape of the nation. According to the 2011 Census of India, there are approximately 1,761,073 native speakers in the country, with significant communities also found in Assam, Tripura, Bangladesh, and Myanmar. The linguistic lineage of Manipuri dates back over two millennia, characterized by a unique trajectory within the Tibeto-Burman family. Unlike many of its neighboring languages, Manipuri possesses its own indigenous script known as Meetei Mayek. It is a remarkable point that Manipuri is the only amongst the Tibeto-Burman languages in India which has its own scripts and written literature.

While the Bengali-derived script was adopted for several centuries starting in the 18th century due to religious shifts, a robust cultural movement has successfully reintroduced the original Meetei Mayek into the educational and administrative sectors. The language has also evolved

through historical contact, incorporating a sophisticated layer of loanwords from Sanskrit, Bengali, and English, yet it retains its distinct tonal and agglutinative morphological structure.

Manipuri literature boasts a rich tradition that spans nearly a thousand years, beginning with archaic chronicles known as Puya. In the Manipuri literature the earliest recognized works include *Numit Kappa* (The Shooting of the Sun), a mythological text with deep ritualistic significance. And the transition to modern literature in the early 20th century saw a flourishing of poetry, drama, and prose, with luminaries such as Hijam Anganghal Singh- often celebrated for his epic poem *Khamba Thoibi Sheireng*- shaping the modern literary identity. Today, Manipuri is a vibrant medium for academic discourse, broadcast media, and a globally recognized cinema industry (Maniwood).

1.4 MANIPURI PARALLEL CORPUS

Manipuri is a highly agglutinative and tonal language belonging to the Tibeto-Burman family, characterized by a sophisticated morphological structure and a unique phonological system. Unlike many of its counterparts in the Indian subcontinent, it utilizes an extensive system of suffixes to denote tense, aspect, and modality, often allowing a single verb root to evolve into a complex semantic unit. While the language primarily adheres to a Subject-Object-Verb (SOV) pattern, its robust case-marking system facilitates a degree of structural flexibility.

Beyond its structural complexity, Manipuri serves as an indispensable resource for the development of parallel text corpora and the study of cross-linguistic phenomena. Its position as a Tibeto-Burman language in a predominantly Indo-Aryan and Dravidian linguistic environment makes it a primary subject for researching syntactic divergence, morphological density, and the intricacies of code-mixing in multilingual settings.

1.5 SUMMARY OF MANIPURI PARALLEL CORPUS

The Manipuri parallel text corpus connected with English and 146 mother tongues of India. Those mother tongues are Anal, Angami, Apatani, Are, Assamese, Awadhi, Bagheli/Baghel Khandi, Bagri Rajasthani, Bagri, Balti, Bengali, Bhadrawahi, Bharmauri/Gaddi, Bhojpuri, Bilaspuri Kahluri, Bodo, Brajbhasha, Bundeli/Bundel khandi, Chakru/Chokri, Chambeali/Chamrali, Chang, Chhattisgarhi, Chirr, Chungli, Churahi, Coorgi/Kodagu, Deori, Dhundhari, Dimasa, Dogri, Gangte, Garhwali, Garo, Gojri/Gujjari/Gujar, Gujarati, Gujar, Halabi, Handuri, Hara/Harauti, Haryanvi, Hindi Multani, Hindi, Irula/Irular Mozhi, Kabui, Kachchhi, Kangri, Kannada, Karbi/Mikir, Kashmiri, Khandeshi, Khari Boli, Khasi, Khezha, Khiemnungan, Khortha/Khotta, Kisan, Kodava, Kokbarak, Kolami, Koli, Kom, Konda, Konkani, Konyak, Koya, Kudubi/Kudumbi, Kuki, Kurmali Thar, Ladakhi, Lepcha, Liangmei, Limbu, Lotha, Lyngngam, Magadhi/Magahi, Maithili, Malayalam, Malvi, Mao, Mara, Maram, Marathi, Maring, Mech/Mechhia, Mewari, Mewati, Miri/Mising, Mishmi, Mizo, Mongsen, Monpa, Mundari, Muwasi, Nawait, Nepali, Nimadi, Nissi, Nocte, Odia, Pahari, Paite, Palmuha, Pania, Pawari/Powari, Phom, Pnar/Synteng, Pochury, Poula, Punjabi, Purkhi, Rai, Rajasthani, Reang, Rengma, Rongmei, Sadan/Sadri, Sambalpuri, Sangtam, Sanskrit, Santali, Saurashtra/Saurashtri, Sema, Shina, Sindhi, Sirmauri, Sugali, Surjapuri, Talgalo, Tamil, Tangkhul, Telugu, Thado,

Tibetan, Tikhir, Tripuri, Tulu, Urdu, Vaiphei, Wagdi, Wancho, Yerava, Yerukala/Yerukula, Yimchungre, Zeliang, Zemi, Zou.

There are 5,332 sentences/phrases in Manipuri which are systematically structured based on 159 grammatical categories. Manipuri has 23963 word count and 146608 character count. The corpus is aligned with 146 mother tongues and English, comprising 4,404,845 words (over 4.4 million tokens) and 23,374,289 characters (approximately 23.3 million).
